

SKYCOM PTT Launches Prepper National Radio Network™

Dedicated encrypted Push-to-Talk over Cellular network gives preparedness-minded customers organized national, regional, state, local team, and family talk groups.

FOR IMMEDIATE RELEASE

Fairview, Tennessee, July 28, 2026 — SKYCOM PTT has launched the Prepper National Radio Network, a dedicated communications platform for customers who purchase eligible SKYCOM PTT Push-to-Talk over Cellular radios. The network is included at no additional charge with eligible radio purchases and is designed to help families, local teams, and preparedness groups stay connected through organized talk groups.

The network includes national, regional, state, local team, and family talk groups for broad updates, regional coordination, state-level activity, team operations, and household communication. Each talk group is protected with AES encryption, and administrators must approve access before customers may enter available talk groups.

Regional talk groups cover all U.S. states and selected territories, while each state has its own private talk group for state-level coordination. Local Prepper teams may receive two additional talk groups at no charge, and members who purchase more than one radio receive two custom family talk groups with up to 100 contacts per talk group.

Availability

“You can’t protect your family, community, and property without good communication,” said a SKYCOM PTT spokesperson. “The Prepper National Radio Network gives members a structured way to stay connected through SKYCOM PTT.”

The Prepper National Radio Network is available exclusively through SKYCOM PTT. Customers can contact SKYCOM PTT to choose an eligible PoC radio and begin using the network.

About SKYCOM PTT

SKYCOM PTT provides Push-to-Talk over Cellular radio solutions and network services designed to help customers stay connected through reliable, organized communications.
